

CONTENTS

Preface	v
Key to Symbols	xi
1. Introduction	1
General Composition of Petroleum—Physical Properties of Hydrocarbons— Origin of Petroleum—Traps—Distribution of Hydrocarbon Fluids in Traps— Lithology of Petroleum Reservoirs—Drilling—Cable-tool Drilling—Rotary Drilling—Well Completion and Production—Reservoir Performance.	
2. Fundamental Properties of Fluid Permeated Rocks	36
Introduction	36
Porosity	36
Laboratory Measurement of Porosity—Precision of Porosity Measurements— Carbonate Rocks—Compressibility of Porous Rocks.	
Permeability	64
Horizontal Flow—Vertical Flow—Radial Flow—Permeability of Combination Layers—Channels and Fractures in Parallel—Analogy of Darcy's Law and Other Physical Laws—Measurement of Permeability—Factors Affecting Per- meability Measurements—Factors in Evaluation of Permeability from Other Parameters.	
Fluid Saturations	100
Methods of Determining Fluid Saturation—Determination of Fluid Saturations from Rock Samples—Factors Affecting Fluid Saturations of Cores—The Use of Core-determined Fluid Saturations.	
Electrical Conductivity of Fluid Saturated Rocks	110
Resistivity Relations—Measurement of Electrical Resistivity of Rocks—Em- pirical Correlation of Electrical Properties.	
3. Properties of Porous Media Containing Multiple Fluid Saturations	133
Surface Forces and Capillary Pressure	133
Fundamentals of Surface and Capillary Forces—Laboratory Measurements of Capillary Pressure—Interstitial Water Saturations—Calculation of Wettabil- ity—Pore-size Distribution and Calculation of Permeability from Capillary- pressure Data.	
Effective and Relative Permeability	174
Laboratory Investigations of Relative Permeability—Three-phase Relative Permeability—Measurement of Relative Permeability Data—Use of Effective and Relative Permeability Data.	
4. Fundamentals of the Behavior of Hydrocarbon Fluids	211
Introduction	211
Basic Concepts of Phase Behavior	212

Single-component Systems—Binary Systems—Multicomponent Systems.	
Properties of the Gaseous State	229
Ideal Gas Laws—Impurities in Natural Gas—Viscosity of Gases—Summary of Properties of Gases.	
Properties of the Liquid State	287
Volumetric Behavior of Liquids—Density of Hydrocarbon Mixtures in the Liquid State—Surface Tension—Viscosity of Liquids—Vapor Pressure.	
Properties of Two-phase Systems	315
Equilibrium Relations—Development of Equations for Calculating Equilibrium Relations—Separator Problems.	
5. Determination and Application of Reservoir Fluid Properties	359
Introduction	359
Sampling Reservoir Fluids	360
Bottom-hole Sampling—Recombination Samples—Split-stream Sampling.	
Laboratory Analysis of Reservoir-fluid Samples	365
Relative Total Volume—Differential Oil Formation Volume Factor and Gas in Solution—Flash Separation Test—Gas Compressibility—Fluid Viscosity—Differential-flash Oil Formation Volume Factors and Gas in Solution—Equilibrium Ratios—Fluid Composition—Presentation of a Fluid Analysis for a Gas-Crude-oil System.	
Preparation of Fluid-analysis Data for Use in Reservoir Calculations	383
Smoothing Laboratory Data—Correction of Laboratory Sample Data for Separator Conditions—Total Volume Factors—Correcting Fluid-analysis Data to Reservoir Bubble-point Pressure.	
Fluid-analysis Data on Gas-condensate Systems	411
Laboratory Measurements.	
Applications of Fluid-analysis Data	415
Fitting Published Equilibrium-ratio Data to Laboratory Fluid-analysis Data	417
Other Methods of Determining Hydrocarbon Fluid Properties	425
Modified Ideal Solutions—Empirical Methods—Calculating Reservoir Volumes for Gas-condensate Systems—Correlations for Fluid Viscosities.	
6. Properties of Water	448
Introduction	448
Physical Properties of Water	450
Solubility of Natural Gas in Water—Compressibility of Water—Thermal Expansion of Water—Water Formation Volume Factor—Density, Specific Volume, and Specific Gravity—Viscosity of Water—Solubility of Water in Natural Gas—Electrical Resistivity of Water.	
Chemical Properties of Water	470
7. Data Evaluation for Reservoir Calculations	473
Introduction	473
Field Records	475
Completion and Workover Records—Production Records—Well Tests.	
Average Fluid Properties	497
Reservoir Fluids Existing in the Gaseous State—Reservoir Fluids Existing in the Liquid State.	
Evaluation of Rock Volume	517
Areal Extent—Isopach Maps.	

CONTENTS

ix

Hydrocarbon Volume	536
Evaluation of Porosity and Permeability—Water Saturation—Calculation of Hydrocarbon Volume.	
8. The Material Balance	561
Introduction	561
Derivation of Material-balance Equation	562
Solution-gas Drive—Solution-gas-Gas-cap Drive—Simple Solution-gas-Gas-cap-Water-drive Reservoirs—Solution-gas-Gas-cap-Water-drive with Fluid Injection—Slightly Compressible Hydrocarbon Reservoirs—Gas Reservoir—Comparison of Drives.	
Data for Material Balance	575
Fluid-production Data—Reservoir Temperatures—Reservoir Pressures—Fluid Analysis—Core Analysis and Laboratory Rock Data.	
Calculation of Oil in Place Using the Material-balance Equation	589
Estimation of Oil in Place for a Solution-gas-drive Reservoir—Estimation of Oil in Place for Slightly Compressible Fluids—Estimates of Gas in Place from Material Balance.	
Name Index	599
Subject Index	603
